Comments.List

Description

Retrieve comments list from the service using filter attributes

Security

This resource returns only those comments that viewable by caller (comment is public or caller was mentioned in the comment or one of its replies)

Resource URL

GET /collab/{environmentId}/{tenantId}/comments?objectId={objectId1}

&objectId={objectId2}

&relatedObjectUri={objectUri}

&includeDeleted={includeDeleted}

&maxResults={maxResults}

&pageToken={pageToken}

&updatedMin={updatedMin}

Example

GET /collab/test-env/tenant1/comments?objectId=entities%2F0298v0D%2Fattributes%2FFirstName%2FHKpEu2b

&objectId=entities%2F043fv9A%2Fattributes%2FFirstName%2FHkpVdh13

&includeDeleted=false

&maxResults=100

&pageToken=gxtfn783l

&updatedMin=1425254400000

Bulk request (for big number of ids)

Resource URL

POST /collab/{ennvironmentId}/{tenantId}/comments/load?includeDeleted={includeDeleted}

&relatedObjectUri={objectUri}

&maxResults={maxResults}

&pageToken={pageToken}

&updatedMin={updatedMin}

Example

POST /collab/test-env/tenant1/comments/load?includeDeleted=false

&maxResults=100

&pageToken=gxtfn783l

&updatedMin=1425254400000

BODY

```
[
    "entities/0298v0D/attributes/FirstName/HKpEu2b",
    "entities/043fv9A/attributes/FirstName/HkpVdh13"
]
```

Response

Input parameters

Parameter	Type	Description
{environmentId}	string	The ID of the environment
{tenantId}	string	The ID of the tenant
{objectIds}	array	The list of object ids for which we need to load comments
{includeDeleted}	boolean	If set, all comments and replies, including deleted comments and replies (with content stripped) will be returned. (Default: false)
{relatedObjectUri}	String	If set, all comments related with the URI will be returned.
{maxResults}	integer	The maximum number of discussions to include in the response, used for paging. Acceptable values are 0 to 100, inclusive. (Default: 20)
{pageToken}	string	The continuation token, used to page through large result sets. To get the next page of results, set this parameter to the value of "nextPageToken" from the previous response.
{updatedMin}	datetime	Only discussions that were updated after this timestamp will be returned.

Output parameters

Parameter	Type	Description
{selfLink}	string	A link back to this list.
{nextPageToken}	string	The token to use to request the next page of results.
{nextLink}	string	A link to the next page of comments.
{items}	array	array of result comments
{items[i].selfLink}	string	A link back to this comment.
{items[i].commentId}	string	Comment identifier
{items[i].createdBy}	string	User name of comment creator
{items[i].createdTime}	datetime	Creation time of the comment
{items[i].modifiedTime}	datetime	The date when this comment or any of its replies were last modified. Equals to createdTime after comment creation
{items[i].deleted}	boolean	Contains true if the comment was deleted and false otherwise
{items[i].visibility}	enum	Possible values: private and public. Private comments are accessible only by people who was mentioned in comment or one of replies
{items[i].status}	enum	Possible values: open and resolved.
{items[i].objectId}	string	Identifier of the object in external system for which this comment is created
{items[i].objectType}	string	Type of the object from external system
{items[i].permanentLink}	string	Permanent UI link for a comment

{items[i].content}	string	Text content of the comment
{items[i].namedUsers}	array	The list of users mentioned in current comment and all its replies
{items[i].relatedObjectUris}	array	The list of object URIs related with the comment
{items[i].replies}	array	array of replies in the comment
{items[i].replies[i].selfLink}	string	A link back to this reply.
{items[i].replies[i].replyId}	string	Reply identifier
{items[i].replies[i].createdBy}	string	User name of reply creator
{items[i].replies[i].createdTime}	datetime	Creation time of the reply
{items[i].replies[i].modifiedTime}	datetime	Modification time of the reply. Equals to createdTime after reply creation
{items[i].replies[i].deleted}	boolean	Contains true if the comment was deleted and false otherwise
{items[i].replies[i].action}	enum	Possible values: none, resolve, reopen. When user changes comment status it is added to replies with action attribute for history and possiblity to displau it in UI
{items[i].replies[i].content}	string	Text content of the comment
{items[i].replies[i].namedUsers}	array	The list of users mentioned in current reply.
